

AMENDMENT NO. 1 JULY 2015
TO
IS 12744 (PART 1) : 2013 READY MIXED PAINT, AIR
DRYING, RED OXIDE – ZINC PHOSPHATE, PRIMING –
SPECIFICATION

PART 1 FOR DOMESTIC AND DECORATIVE APPLICATIONS

(First Revision)

[Designation 'IS 12744 (Part 1) : 2013' at top corner of first cover page and all subsequent pages] — Delete '(Part 1)' from designation and wherever appearing.

(First cover page, Hindi title) — Delete 'भाग 1 घरेलू और सजावटी प्रयोग के लिए'

(First cover page and Page 1, English title) — Delete 'PART 1 FOR DOMESTIC AND DECORATIVE APPLICATIONS'

(Second cover page, Foreword, para 1, line 1) — Delete '(Part 1)'.

(Second cover page, Foreword, para 3 to para 5) — Substitute the following for the existing paras:

'Revision of this standard has been taken up with a view to incorporate the limit of lead restriction in this standard. The Committee responsible for formulation of this standard observed that some paints such as the paint prescribed in this standard are in practice used for household/decorative coatings as also for industrial and commercial applications. Taking cognizance of the fact that exposure to lead of human being, particularly children, has adverse impact on human health and safety, the Committee felt the need to introduce lead restriction in all such paint standards.

Accordingly, during first revision, the Committee had split this standard into two parts that is, IS 12744 (Part 1) to deal with Ready mixed paint, air drying, red oxide — zinc phosphate, priming for domestic and decorative applications and IS 12744 (Part 2) for industrial purposes. IS 12744 (Part 1) was published

Amendment No. 1 to IS 12744 (Part 1) : 2013

in October 2013. The issue of splitting the standard into two parts was reviewed by the Committee and it was felt that such splitting of the standard into two parts may create confusion in the minds of the consumers. The Committee therefore, decided not to proceed further with progress of IS 12744 (Part 2) of the standard and to withdraw the same from printing.

The Committee, further, decided to issue an amendment to IS 12744 (Part 1) whereby the part needs to be deleted. Accordingly, this amendment is being issued.

The Committee observed that this primer is suitable for use, as a primer in the painting system for the protection of metal works, both under marine and inland outdoor condition including for household/decorative purposes and opined that formulation of this product with a very low lead content is technologically feasible. Therefore, in this standard, lead restriction up to a maximum permissible limit of 90 ppm has been prescribed, so as to prevent lead exposure of children and adults and consequent adverse impact on human health and safety and also in view of further scope for exposure of children to the dried paint surfaces. Further, majority of consumers are not aware of the consequence of lead toxicity and its long term implications to human health. Therefore, in this revision, along with lead restriction requirement, a suitable cautionary notice has been included in the marking clause’.

(Page 1, clause 1) — Substitute the following for the existing :

‘1 SCOPE

This standard prescribes the requirements and methods of sampling and test for the material commercially known as ready mixed paint, red oxide-zinc phosphate, priming. The material is suitable for use, as a primer in the painting system for the protection of steel work, both under marine and inland outdoor conditions including application for household/decorative purposes.’
