

AMENDMENT NO. 1 JULY 2023
TO
IS 12832 : 2010 AUTOMOTIVE VEHICLES — INTERIOR NOISE — METHOD OF
MEASUREMENT AND REQUIREMENTS
(First Revision)

(Page 6, clause 14.2) — Substitute the following for existing:

‘**14.2** In case of following changes, the verification shall be carried out for establishing compliance of the changed parameters to the requirements specified in this standard. The following is applicable only for the verification as per **7.4.3**:

- a) In case of change in capacity, number and arrangement of cylinders, test needs to be conducted for compliance;
- b) In case of change in compression ignition engines to Positive Ignition engines or base petrol engine to CNG or LPG keeping the power within the tolerance specified below, no test needs to be conducted for compliance:
 - 1) In case of increase in rated engine power up to 10 percent or any decrease of rated engine power.
- c) In case of increase in rated engine speed up to 10 percent or any decrease of rated engine speed;
- d) In case of any changes in transmission ratios, axle ratios and type, size and ply rating of tyres;
- e) In case of any increase in the interior length or a decrease in interior length by less than 10 percent;
- f) In case of any decrease in the maximum fan tip speed or an increase in the fan tip speed up to 10 percent;
- g) In case of any decrease in the blades or an increase in the number of blades up to 30 percent (rounded off to nearest whole number, as per Indian Standard);
- h) In case of change in the fan drive from mechanical to either viscous or electrical or from viscous to electrical;
- j) In case of any change in fan shroud, blade material, thickness, profile and design details; and
- k) Changes other than the above is considered as not affecting compliance and do not call for any test.’
