

**AMENDMENT NO. 1    SEPTEMBER 1987**

**TO**

**IS:1956(Part 5)-1976    GLOSSARY OF TERMS  
RELATING TO IRON AND STEEL**

**PART 5 BRIGHT STEEL BAR AND STEEL WIRE**

**(First Revision)**

**(Page 4, clause 2.5, first sentence) -  
Substitute the following for the existing first  
sentence:**

**'2.5 Bar - Finished product of solid section  
generally supplied in straight length, which may be  
rectangular, square, round or half round, or  
polygonal.'**

**(Page 5, clause 2.15) - Substitute the  
following for the existing clause:**

**'2.15 Bright Bar - Bars of bright finish produced  
from hot rolled products by cold drawing, turning  
(peeling) or grinding, or a combination of these  
processes to attain a comparatively smooth surface  
and considerably higher standard of dimensional  
accuracy. In the bright drawing process reduction  
in cross-section or removal of metal from a section  
are not very large. These are supplied only in  
straight lengths.'**

**(Page 10, clause 2.102) - Substitute the  
following for the existing clause:**

**'2.102 Wire Rod - It is generally square, round,  
half round, rectangular, or polygonal, hot rolled  
product in the coiled form. It is generally  
intended for conversion into wire.'**

**(Page 12, clause 2.138) - Substitute the following for the existing clause:**

**'2.138 Wire - A product in coil form obtained from wire rod, generally in round, half round, square, hexagonal, flat or of any other section including grooved section, characterized by the fact that it has been subjected to cold drawing through a die or by other mechanical means. It is usually more severely cold drawn than bright bars.'**
