

AMENDMENT NO. 1 FEBRUARY 2016
TO
IS 2074 (PART 1) : 2015 READY MIXED PAINT, AIR
DRYING, RED OXIDE — ZINC CHROME, PRIMING —
SPECIFICATION

PART 1 FOR DOMESTIC AND DECORATIVE APPLICATIONS

(Third Revision)

(First cover page and pages 1 to 5, Designation) — Delete ‘(Part 1)’.

(First cover page, Hindi title) — Delete ‘भाग 1 घरेलू और सजावटी प्रयोग के लिए’.

(First cover page and Page 1, English title) — Delete ‘PART 1 FOR DOMESTIC AND DECORATIVE APPLICATIONS’.

(Second cover page, Foreword, para 1, line 1) — Delete ‘(Part 1)’.

(Second cover page, Foreword, para 3 to para 6) — Substitute the following for the existing paras:

‘Revision of this standard has been taken up with a view to incorporate the limit of lead restriction in this standard. The Committee responsible for the formulation of this standard observed that some paints such as the paint prescribed in this standard are ‘in practice’ used for household/decorative coatings as also for industrial and commercial applications. Taking cognizance of the fact that exposure to lead of human being, particularly children, has adverse impact on human health and safety, the Committee, therefore, felt the need to introduce lead restriction in all such paint standards.

The Committee observed that this primer paint is extensively used for protection of grills, gates, window frames (metal), etc, in houses and buildings. It means this paint has dual applications, namely usage for household/decorative purposes and usage for industrial/commercial applications. Accordingly, during third revision, the Committee had split this standard into two parts that is, IS 2074 (Part 1) to deal with ready mixed paint, air drying, red oxide–zinc chrome, priming for domestic and decorative applications and IS 2074 (Part 2) for

Amendment No. 1 to IS 2074 (Part 1) : 2015

industrial purposes. IS 2074 (Part 1) was published in October 2015. The issue of splitting the standard into two parts was reviewed by the Committee and it was felt that such splitting of the standard into two parts may create confusion in the minds of the consumers. The Committee therefore, decided not to proceed further with progress of IS 2074 (Part 2). The Committee, further, decided to issue an amendment to IS 2074 (Part 1), whereby the part need to be deleted. Accordingly, this amendment is being issued.

The Committee observed that technologically it is feasible to formulate this product with a very low lead content. Therefore, in this standard, lead restriction up to a maximum permissible limit of 90 ppm has been prescribed, so as to prevent lead exposure of children and adults and consequent adverse impact on human health and safety and also in view of further scope for exposure of children to the dried paint surfaces. Further, majority of consumers are not aware of the consequence of lead toxicity and its long term implications to human health. Therefore, in this revision, along with lead restriction requirement, a suitable cautionary notice has been included in the marking clause. The reference to different Indian standards have been up dated (for example, for volume solids) and corrected, wherever necessary.’

(Page 1, clause 1.1, line 1) — Delete ‘(Part 1)’.
