

AMENDMENT NO. 1 JULY 2015
TO
IS 133 (PART 1) : 2013 ENAMEL, INTERIOR:
(a) UNDERCOATING (b) FINISHING — SPECIFICATION

PART 1 FOR HOUSEHOLD AND DECORATIVE PURPOSES

(Fifth Revision)

[Designation ‘IS 133 (Part 1) : 2013’ at top corner of first cover page and all subsequent pages] — Delete ‘(Part 1)’ from designation and wherever it is appearing.

(First cover page, Hindi title) — Delete ‘भाग 1 घरेलू और सजावटी प्रयोग के लिए’

(First cover page and Page 1, English title) — Delete ‘PART 1 FOR DOMESTIC AND DECORATIVE PURPOSES’.

(Second cover page, Foreword, para 1, line 1) — Delete ‘(Part 1)’.

(Second cover page, Foreword, para 3 to para 5) — Substitute the following for the existing paras:

‘This is one of the few standards where maximum lead content has already been prescribed as 5 Percent. The Committee responsible for formulation of this standard observed that some paints such as the paint prescribed in this standard are ‘in practice’ used for household/decorative coatings as also for industrial and commercial applications. Taking cognizance of the fact that exposure to lead of human being, particularly children, has adverse impact on human health and safety, the Committee, therefore, felt the need to introduce lead restriction in all such paint standards.

Accordingly, during fifth revision, the Committee had split this standard into two parts that is, IS 133 (Part 1) to deal with enamel, interior meant for household and decorative applications and IS 133 (Part 2) for industrial purposes. IS 133 (Part 1) was published in October 2013. The issue of splitting the standard into two parts was reviewed by the Committee and it was felt that such splitting of the standard into two parts may create confusion in the minds of the consumers. The Committee therefore, decided not to proceed further with

Amendment No. 1 to IS 133 (Part 1) : 2013

progress of IS 133 (Part 2) of the standard and to withdraw the same from printing.

The Committee, further, decided to issue an amendment to IS 133 (Part 1) whereby the part need to be deleted. Accordingly, this amendment is being issued.

Naturally occurring extenders/ fillers are not used as a part of the constituents of synthetic enamel based products. It is technologically feasible to formulate this product with a very low lead content. Therefore, in this standard, lead restriction up to a maximum permissible limit of 90ppm has been prescribed, so as to prevent lead exposure of children and adults and consequent adverse impact on human health and safety and also in view of further scope for exposure of children to the dried paint surfaces’.

(Page 1, clause 1.1, line 1) — Delete ‘(Part 1)’.

(Page 1, clause 1.2, para 2) — Delete.
