

AMENDMENT NO. 3 SEPTEMBER 1988

TO

**IS : 2243 - 1971 SPECIFICATION FOR
DRILL CHUCKS**

(*First Revision*)

(Page 8, clause 9.1) — Add the following new clause after 9.1:

'9.1.1 The procedure for testing the torque rating of drill chucks shall be adopted as under:

Fit the chuck on its appropriate shank. Insert the test mandrel in the chuck so as to abut against the chuck body and then pull it out by about 2 mm. The test mandrel is gripped by the jaws; tightening with one hand applying the key to each of the three holes. The test mandrel is subjected to a twisting moment given in Fig 4. The test mandrel shall not turn in the chuck and neither should the chuck twist/become loose in its shank.

NOTE 1 — The diameter of the test mandrel should be approximately equal to the maximum capacity of the drill chuck.

NOTE 2 — The torsional movement should be applied at a distance approximately equal to 'L' as shown in 8.2.

(Page 8, clause 9.2) — Delete.

(EDC 11)
