

AMENDMENT NO. 3 NOVEMBER 2012
IS 649 : 1997 METHOD OF TESTING STEEL SHEETS FOR
MAGNETIC CIRCUITS
OF POWER ELECTRICAL APPARATUS

(Second Revision)

[Page 2 Section 1 (*see also Amendment No. 2*)] — Insert the following new clause at the end:

‘6.1.2.15 Magnetic testing as given this section is for conventional grain oriented steel (CGO), high permeability grain oriented (HPGO) and non-oriented electrical steel. In case of some HPGO grades like domain refined not amenable for heat treatment use the test method as given in IEC 60404-3 : 1992 + A 1 : 2002 ‘Magnetic materials Part 3: Methods of measurement of the magnetic properties of magnetic sheet and strip by means of a single sheet tester’.

NOTE — As an alternative to IEC 60404-3; the methods for single sheet test as given in ASTM 804 or JIS 2556 may be followed, subject to agreement between the purchaser and the manufacturer.’

(Page 21, Section 8, clause **49**) — Substitute the following for the existing clause:

‘49 DETERMINATION OF DUCTILITY OF ELECTRICAL STEEL SHEETS

This test method covers determination of ductility utilizing Epstein test strips and a bending device for bending the strip over a pre-determined radius. It is intended for grain oriented and non-oriented electrical sheet or strip.’
