

AMENDMENT NO. 2 NOVEMBER 2021

TO

**IS 16219 : 2014 AUTOMOTIVE VEHICLES — METALLIC
FUEL TANKS — SPECIFICATIONS**

(Page 2, clause 4.11) — Add the following new clause after the clause:

‘4.12 These requirements are especially applicable to the vehicles fitted with more than one fuel tanks. Following safety precautions shall be ensured to protect against fuel leakage due to unforeseen situations:

- a) Protection of fuel hoses against chafing, kinking, or other causes of mechanical disruptions shall be ensured by use of appropriate quality hoses as per National / International Standards.
- b) The fuel tanks along with its aggregates shall be installed in such a way that, they shall be adequately protected by parts of chassis frame members and / or bodywork, against possible contact with obstacles on ground or vehicle parts. The fuel lines routing shall ensure necessary clamping and protection. They shall remain enclosed with multiple layers of protection and shall be long and flexible enough to accommodate normal movements of the parts to which it is attached without causing any mechanical damage.

NOTE — General requirements specified under **4.12** are not applicable to off-road vehicles.’
