

AMENDMENT NO. 1 APRIL 1985
TO
IS:1051-1980 SPECIFICATION FOR PYRETHRUM EXTRACTS
(Second Revision)

(Page 6, clause 4.1 and Note) - Substitute the following for the existing matter:

'4.1 Representative samples of the material shall be drawn as prescribed in IS:10627-1983 Methods for sampling of pesticidal formulations.'

(Page 7, clause A-2.6) - Substitute the following for the existing matter:

'A-2.6 Synthetic Pyrethroid - Allethrin and others.'

(Page 8, clause A-3.3.2) - Add the following new matter at the end:

'In strip 4 next, similarly spot allethrin or other synthetic pyrethroids in methanol (0.2% m/v). In the last strip 5, spot 5 µl of standard for TLC and then superimpose 5 µl of allethrin or other synthetic pyrethroids on the same spot.'

(Page 8, clause A-3.3.3) - Substitute the following for the existing matter:

'A-3.3.3 Allow the solvents from the spots to evaporate and keep this plate in the developing tank at 28° to 35°C. Allow the plate to develop for about 40 minutes when the solvent front reached the top line uniformly. Remove the plate and allow the solvents to evaporate completely by keeping it at about 80°C for 10 minutes. Keep the plate in iodine vapours when the spots are developed after an hour.'

(Page 9, clause A-4.1) - Substitute the following for the existing matter:

'The sample shall be considered genuine and free from synthetic pyrethroid allethrin or others, if chromatogram in strip 1, 2 and 3 are identical and also differ from the chromatogram in strip 5 as regards additional spot/spots (including elongated merged spots). Presence of allethrin or other synthetic pyrethroid is confirmed by additional spot/spots (including elongated merged spot/spots) in case of chromatogram of strip 2, 3 and 5 which also corresponds to the spot/spots of synthetic pyrethroid in strip 4. The sample will be rejected if allethrin or other synthetic pyrethroid is present.'

(Page 9, clauses A-4.2 and A-4.3) - Delete.

(AFCD 6)
