

AMENDMENT NO. 5 MARCH 2017
TO
IS 1239 (PART 1) : 2004 STEEL TUBES, TUBULARS AND
OTHER WROUGHT STEEL FITTINGS —
SPECIFICATION

PART 1 STEEL TUBES

(Sixth Revision)

(Second cover page, Foreword, Para 6) — Insert the following after sixth para as a separate para:

‘Provisions in the standard are at variance with similar provisions in ISO 65 : 1981 ‘Carbon steel tubes suitable for screwing in accordance with ISO 7/1’, in view of the following:

- a) Geographical factors which determine the end use;
- b) Technological factors associated with the process of manufacture of the product (such as steel through induction process), which influence the product characteristics (chemical composition and mechanical properties like elongation, ductility etc.); and
- c) Practices adopted in this country for pipe fittings and laying, the skill level of workers which also influence the product characteristics (such as threading, joints, etc).

The major deviations are:

- 1) The series covered are at variance. Only one Light Series, equivalent to Light Series 2 of ISO 65, is applicable in this standard, whereas two light series that is, Light Series 1 and Light Series 2 are applicable as per ISO 65. Also, thickness of 80 NB Heavy Series, 125 NB and 150 NB Medium Series vary from that of ISO 65.
- 2) Chemical compositions vary from that of ISO 65. The S & P limit in this standard is lower than that of ISO 65.
- 3) The permissible variation in case of product analysis of seamless tubes has been included in this standard whereas it is not part of ISO 65.

Amendment No. 5 to IS 1239 (Part 1) : 2004

- 4) Mechanical properties specified in this standard vary from that of ISO 65.
- 5) The negative tolerance for thickness varies from that of ISO 65.
- 6) Socket fitting is at variance. This standard does not permit supply of screwed tubes without socket whereas ISO 65 permits supply of screwed tubes without socket.'
